What is White Cement?

White cement is a type of Portland cement that is made from pure limestone and clay. It is white in color due to the absence of iron oxide, which is the pigment that gives ordinary Portland cement its gray color. White cement is used in a variety of applications, including architectural concrete, precast concrete, and concrete countertops.

Why is White Cement Used?

White cement is used for a variety of reasons, including:

- Its white color makes it ideal for use in architectural applications where a light or bright color is desired.
- It is more resistant to staining and fading than ordinary Portland cement.
- It has a higher strength than ordinary Portland cement.

What are the Advantages of White Cement?

The advantages of white cement include:

- Its white color makes it ideal for use in architectural applications where a light or bright color is desired.
- It is more resistant to staining and fading than ordinary Portland cement.
- It has a higher strength than ordinary Portland cement.

What are the Disadvantages of White Cement?

The disadvantages of white cement include:

- It is more expensive than ordinary Portland cement.
- It is not as widely available as ordinary Portland cement.
- It can be more difficult to work with than ordinary Portland cement.

How is White Cement Made?

White cement is made from pure limestone and clay. The limestone is calcined, or heated to a high temperature, to drive off the carbon dioxide. The calcined limestone is then ground into a fine powder. The clay is also ground into a fine powder. The limestone and clay powders are then mixed together and heated in a kiln to form clinker. The clinker is then cooled and ground into a fine powder to produce white cement.
