Science 8: Electromagnetic Spectrum Worksheet Answer Key

1. What is the electromagnetic spectrum?

The electromagnetic spectrum is a spectrum of all possible frequencies of electromagnetic radiation. It is divided into seven sections, from the longest wavelengths (radio waves) to the shortest wavelengths (gamma rays).

2. What are the different parts of the electromagnetic spectrum?

The seven parts of the electromagnetic spectrum are, in order of increasing frequency and decreasing wavelength: radio waves, microwaves, infrared radiation, visible light, ultraviolet radiation, X-rays, and gamma rays.

3. What is the relationship between wavelength and frequency?

Wavelength and frequency are inversely proportional, meaning that as wavelength increases, frequency decreases, and vice versa.

4. What are the uses of different parts of the electromagnetic spectrum?

- Radio waves: communication, navigation, remote control
- Microwaves: cooking, heating, communication
- Infrared radiation: heat imaging, night vision, remote control
- Visible light: vision
- **Ultraviolet radiation:** tanning, disinfection, sterilization
- X-rays: medical imaging, security scanning
- Gamma rays: cancer treatment, sterilization

5. What are some examples of electromagnetic radiation in everyday life?

- Television signals
- Cell phone signals
- Microwave ovens
- Infrared heaters
- Visible light from the sun
- UV lamps
- X-ray machines
