True Hallucinations: A Conversation with Terence McKenna

What are true hallucinations?

True hallucinations are vivid, sensory experiences that occur in the absence of any

external stimuli. They can involve any sensory modality, including vision, hearing,

touch, smell, and taste. True hallucinations are distinct from illusions, which are

distortions of real sensory experiences, and from hallucinations induced by drugs or

mental illness.

Are true hallucinations common?

True hallucinations are relatively rare, but they can occur in a variety of situations.

They are most common in people who are sleep-deprived, stressed, or in sensory

deprivation environments. True hallucinations can also be a symptom of certain

medical conditions, such as schizophrenia.

What causes true hallucinations?

The exact cause of true hallucinations is unknown, but there are several theories.

One theory is that true hallucinations are caused by abnormal activity in the brain's

sensory processing areas. Another theory is that true hallucinations are caused by a

breakdown in the brain's ability to distinguish between real and imagined

experiences.

Can true hallucinations be treated?

There is no specific treatment for true hallucinations. However, the underlying cause of the hallucinations can be treated, which may reduce the frequency and severity of the hallucinations. For example, if true hallucinations are caused by sleep deprivation, getting more sleep may help to reduce the hallucinations. If true hallucinations are caused by a medical condition, treating the condition may help to reduce the hallucinations.

What is the significance of true hallucinations?

True hallucinations are a fascinating phenomenon that can shed light on the nature of consciousness. They also provide a unique window into the human experience of reality. True hallucinations have been used for centuries in religious and spiritual practices, and they continue to be a source of wonder and inspiration for people today.

Texture Feature Extraction in MATLAB: Questions and Answers

Q: What is texture feature extraction? A: Texture feature extraction involves extracting quantitative measures that describe the spatial arrangement of pixels in an image, providing insights into its surface or structural properties.

Q: How can I perform texture feature extraction in MATLAB? A: MATLAB provides built-in functions for texture feature extraction, such as graycoprops, graycomatrix, and makemask. These functions allow you to compute commonly used texture statistics, including mean, variance, entropy, and energy.

Q: What are some of the MATLAB functions used for texture analysis? A:

- graycoprops: Calculates second-order gray-level co-occurrence matrix features.
- graycomatrix: Generates the gray-level co-occurrence matrix.
- makemask: Creates a binary mask to specify the regions of interest for feature extraction.

Q: What is the significance of using masks in texture feature extraction? A: Masks enable the isolation of specific image areas for analysis, preventing the influence of irrelevant background or noise. This helps obtain more accurate texture EXPLORING CORPORATE STRATEGY 2006 GERRY JOHNSON KEVAN

representations of the targeted regions.

Q: Where can I find MATLAB code examples for texture feature extraction? A: Numerous MATLAB code examples for texture feature extraction are available online, including the official MATLAB documentation and open-source repositories. The code often involves defining the image, computing texture statistics, and visualizing the results.
