Paragraph 1: Questions 1-3

Q1: What is the mean of the following dataset: 5, 10, 15, 20, 25? Q2: What is the standard deviation of the dataset in Q1? Q3: What is the probability of rolling a 6 on

a six-sided die?

Paragraph 2: Answers 1-3

A1: Mean = (5 + 10 + 15 + 20 + 25) / 5 = 15 A2: Standard deviation = 7.91

(approximately) A3: Probability = 1 / 6

Paragraph 3: Questions 4-6

Q4: What is the null hypothesis in a hypothesis test? Q5: What is a Type I error? Q6:

What is the p-value in hypothesis testing?

Paragraph 4: Answers 4-6

A4: The null hypothesis is the statement that there is no significant difference

between the groups being tested. A5: A Type I error occurs when the null hypothesis

is rejected, even though it is actually true. A6: The p-value is the probability of

observing a test statistic as extreme as, or more extreme than, what was obtained,

assuming the null hypothesis is true.

Paragraph 5: Question 7

Q7: What is the central limit theorem?

Answer 7

A7: The central limit theorem states that the distribution of sample means will be

approximately normal, regardless of the distribution of the original population. This is

true for large sample sizes.

Does the magnetic field affect human health? The Earth's magnetic field does not

storms, but the hazard is due to the radiation, not the magnetic field itself.

Do electromagnetic fields pose a public health risk? Scientists and regulatory agencies generally agree that low-frequency EMFs pose little danger to human health.

How does electromagnetic frequency affect humans? Low-frequency magnetic fields induce circulating currents within the human body. The strength of these currents depends on the intensity of the outside magnetic field. If sufficiently large, these currents could cause stimulation of nerves and muscles or affect other biological processes.

What does EMF exposure do to your body? EMFs influence metabolic processes in the human body and exert various biological effects on cells through a range of mechanisms. EMF disrupts the chemical structures of tissue since a high degree electromagnetic energy absorption can change the electric current in the body [23].

What are the symptoms of EMF toxicity? The symptoms most commonly experienced include dermatological symptoms (redness, tingling, and burning sensations) as well as neurasthenic and vegetative symptoms (fatigue, tiredness, concentration difficulties, dizziness, nausea, heart palpitation, and digestive disturbances).

Which organ in the human body is primarily affected by magnetic? In the brain and heart of the human body, the magnetism produced is significant. The Magnetism present in the brain of a human is used to obtain the images of internal parts of the brain by using a technique known as MRI(Magnetic Resonance Imaging)

**Does living near power lines cause health problems?** They reported epidemiologic data suggesting an association between the configuration of power lines near homes and the incidence of leukemia and other types of childhood cancer. Similar studies have been published in succeeding years in the United States and in numerous other countries.

What does EMF do to your brain? Neurological cognitive disorders, such as headache, tremor, dizziness, loss of memory, loss of concentration and sleep disturbance due to RF-EMF have also been reported by several epidemiological MICROSOFT EXCEL INTERVIEW QUESTION ADVANCED EXCEL PROGRAMMING INTERVIEW

studies (Kolodynski and Kolodynska, 1996; Santini et al., 2002; Hutter et al., 2006; Abdel-Rassoul et al., 2007).

What is a safe EMF distance from power lines? If the power lines are more than 300 feet away, there should be no cause for concern. At this distance EMF from the lines is no different from typical levels around the home. If the power lines are less than 300 feet away from the home, you may want to obtain EMF measurements in the yard.

**Do cell phones emit EMF?** Cell phones emit radiation in the radiofrequency region of the electromagnetic spectrum.

**Is RF energy harmful?** Exposure to very high RF intensities can result in heating of biological tissue and an increase in body temperature. Tissue damage in humans could occur during exposure to high RF levels because of the body's inability to cope with or dissipate the excessive heat that could be generated.

What do electromagnetic waves do to your body? In the area of radiofrequencies, exposure to high levels of electromagnetic waves can cause heating of biological tissues (the skin, but also the body's internal tissues); this is known as the thermal effect.

**How to block electromagnetic waves?** It's applied both to home appliances and medical devices. Typical materials used for electromagnetic shielding include thin layer of metal, sheet metal, metal screen, and metal foam. Common sheet metals for shielding include copper, brass, nickel, silver, steel, and tin.

How does electromagnetism affect the community? Electromagnetism affects our environment in that electromagnetic exposure affects plants and human beings. High energy microwave radiation occurring at varying frequencies from 300MHz and 300GHz may be carcinogenic, thus causing thermal effects, thus, increasing the temperature of exposed organisms.

**Does Wi-Fi emit EMF?** Wi-Fi is a technology that allows devices such as computers, smart phones, video game consoles and smart home devices to communicate data wirelessly. It is often used to link home computers and tablets to the internet. Wi-Fi equipment emits radiofrequency electromagnetic fields (EMF). **Can EMF cause neurological problems?** Exposure of cultured neurons to RF-EMF results in neurotoxicity, with oxidative damage caused to mitochondrial DNA31. Thus, RF-EMF exposure could induce various neurological changes.

**Can EMF cause mental illness?** EMF exposure can cause neurobehavioral disorders, including circadian imbalance, headache, fatigue, depression and anxiety.

What frequencies are harmful to humans? In addition to decibel levels, harmful sound frequencies can also be damaging to human hearing. Low frequencies (under 20 Hz) and high frequencies (above 20,000 Hz) that humans cannot perceive can also affect the ear and have adverse effects on our health.

What do magnets do to the brain? Transcranial Magnetic Stimulation (TMS) manipulates brain activity on the surface areas of the brain. So far, neuroscientists have used TMS to improve memory, reaction times, and many other cognitive abilities. Despite these promising results, the long-term effects are ill-understood.

Can magnetic fields affect the brain? Static magnetic fields have been shown to induce effects on the human brain. Different experiments seem to support the idea that moderate static magnetic field can exert some influence on the gating processes of the membrane channels.

Which human sense organ may be sensitive to magnetic fields? Other groups suggest a protein in the retina called cryptochrome, which senses incoming light, also responds to magnetic fields.

**Do magnets have any effect on the human body?** For the same reason that we don't interact much with magnetic fields, magnets can't do anything of consequence for a person's health.

How do magnetic fields affect the human brain? Specifically, applying transcranial static magnetic field stimulation (tSMS) over the human precentral cortex reduces the excitability of the motor cortex (Oliviero et al., 2011; Silbert et al., 2013; Nojima et al., 2015; Arias et al., 2017) and can transiently alter the intracortical inhibitory system (Nojima et al., ...

What effect does magnetic field have on human blood? This study investigates the apparent additive viscosity due to magnetic effects on the human blood. Experimental results show that blood flow rate under gravity decreases by 30% when subjected to a high magnetic field of 10 T.

How much magnetic field is safe for humans? A short exposure to a magnetic field larger than 100  $\mu$ T does not necessarily constitute a risk. By setting the limit at 100  $\mu$ T, a large safety margin has been included. Most devices are also not used close to the body. For occupational situations, the safety limit is set at 500  $\mu$ T.
