What is the best resource to learn Emacs? Mastering Emacs is the best book about learning Emacs. Bar none. It's a common refrain, but Emacs is the product of 40 years of continuous effort to build an extensible, self-documenting text editor. With that, comes complexity; but also freedoms that no other IDE or editor can give you.

Is Emacs harder to learn than Vim? Emacs is easier to learn since it has a more natural interface (for users familiar with GUI-based text editors). Since Vim has different editing modes, beginners find it a little harder to learn.

It's about as big a change as learning about an OS other than Windows for the first time, or learning programming for the first time.

Why would anyone use Emacs? When you use Emacs or Vim and live on the command line every project has the same workflow. What is Emacs best for? Emacs is a text editor designed for POSIX operating systems and available on Linux, BSD, macOS, Windows, and more. Users love Emacs because it features efficient commands for common but complex actions and for the plugins and configuration hacks that have developed around it for nearly 40 years.

What is the downside of Emacs? Emacs Cons: If you want to customize Emacs you'll need to learn Emacs Lisp which introduces a whole new learning curve. Not available everywhere by default. If you need to edit files on a system that you don't have root access to and emacs isn't installed, then you'll end up using vim.

Should beginners use Emacs or Vim? Experts often point out that both Emacs and Vim have steep learning curves but reward the user immensely once mastered. They note that Emacs offers a more adaptable environment due to its extensive customization capabilities. However, Vim's learning curve is more about mastering efficiency in text manipulation.

Can you do everything in Emacs? I deleted every software I have on my computer-The image view, the desktop GUI, the pdf viewer, text editors, menus… EVERYTHING. And used literally just Emacs for everything and here's what I did and how I did it. I think it's a fairly good workflow to work in and could be used as your complete operating system focus.

How can I learn Emacs fast? As others say, begin with the built in tutorial. It should be as simple opening Emacs and pressing enter. If for some reason it's not that simple, open Emacs and press Control+h followed by 't'. The tutorial walks you through the basics.

Why is Emacs so hard to use? Some commands cannot be accessed through a menu, but ALL commands can be invoked from the keyboard. Unfortunately, this is where emacs gets its bad reputation. Emacs often uses multiple key combinations where some keys have to be "modified" by also pressing the control or esc keys first.

Why Neovim is better than Emacs? Speed and performance: I've found that Neovim is much faster and more responsive than Emacs. It also uses fewer resources, which means I can run it on lower-end machines without any issues.
