What is a vector format logo? Vector logos are made up of paths defined by mathematical equations, which include points, lines, and curves. This structure allows them to be scaled to any size without losing quality. Raster logos, on the other hand, are composed of pixels, small squares of color, which make up the image.

What is a vector EPS? EPS (Encapsulated Postscript) files are a type of vector image file, which means they're made up of lines and curves rather than pixels. This makes them ideal for logos, illustrations and other types of graphics that need to be resized without losing quality.

How do I convert a JPEG to vector?

How do I know if a logo is vector? If it maintains the same resolution when you increase its size, it's most likely a vector file. If the image gets pixelated, it's most likely a raster file.

Why do I need a vector file for my logo? Why is this important? Having your logo ready to go in a vector format makes it easier to upload to social media like
