2910 Float Tape Transmitter: Frequently Asked Questions

What is a 2910 Float Tape Transmitter (FTT)?

A 2910 FTT is a versatile level measurement device designed for continuous level monitoring in various tank applications. It consists of a float attached to a flexible tape that unwinds from a reel. As the liquid level changes, the float rises or falls, causing the tape to unwind or rewind.

How does the 2910 FTT work?

The 2910 FTT utilizes a potentiometer connected to the tape reel. As the tape unwinds or rewinds, the potentiometer changes resistance. This resistance change is converted into a proportional electrical output signal, typically 4-20 mA or 0-10 V.

What are the benefits of using a 2910 FTT?

- **Cost-effective:** Compared to other level measurement technologies, the 2910 FTT offers a cost-efficient solution.
- **Versatile:** Suitable for various tank applications, including corrosive environments, high or low temperatures, and varying mounting orientations.
- **Accurate and reliable:** The precision potentiometer and robust construction ensure accurate level measurement over a wide range of operating conditions.

What are the specifications of the 2910 FTT?

The 2910 FTT is available in different models with varying tape lengths, output ranges, and materials. Some common specifications include:

- Tape lengths: Up to 150 feet
- Measurement ranges: 0-10 feet to 0-250 feet
- Accuracy: ±0.5% of measurement range
- Output: 4-20 mA or 0-10 V

What are the applications of the 2910 FTT?

The 2910 FTT is widely used in tank applications for level monitoring in various industries such as:

- Water and wastewater treatment
- Chemical processing
- Food and beverage production
- Petrochemical storage
