What are credit risk metrics? Credit risk metrics are quantitative tools and measurements used to assess and quantify the risk of default associated with a borrower. These metrics include factors such as credit scores, debt-to-income ratios, and probability of default models.

What is a credit scorecard? A credit scorecard is a lookup table that maps specific characteristics of a borrower into points. The total number of points becomes the credit score. Credit scorecards are a widely used type of credit scoring model.
