What is the origin of the Baltic Sea? It originated in the Scandinavian mountains. From there, the glaciers spread mainly to the east and south. In this process, they deeply excavated the Baltic Sea basin and pushed large quantities of rock particles of all sizes forward, from fine clay to huge erratic blocks.

What is the marine life of the Baltic Sea? The fauna of the Baltic Sea is a mixture of marine and freshwater species. Among marine fishes are Atlantic cod, Atlantic herring, European hake, European plaice, European flounder, shorthorn sculpin and turbot, and examples of freshwater species include European perch, northern pike, whitefish and common roach.

Why is the Baltic Sea so special? The Baltic Sea is the youngest sea on the planet, almost enclosed, experiencing near-arctic conditions and is one of the world's largest brackish waters.

Where does Baltic DNA come from? The Baltic People, once part of the Indo-European group, originated from the Pontic-Caspian Steppe, near the Black and Caspian Seas. Later, they migrated to the coastal regions of the Baltic Sea.

Why is Baltic Sea so dark? [2] The Baltic Sea waters are well known for their high content of colored dissolved organic matter (CDOM) which strongly influences their optical properties by reinforcing the absorption of light, and thus leading to very low reflectances in the blue part of the visible spectrum.

Why is the Baltic Sea a dead zone? This is because the Baltic Sea tends to become anoxic due to its enclosed nature. The inland sea is dependent on inflows of oxygen-rich water from the Atlantic Ocean, but the only connections to the world's oceans is through the Danish the Danish straits and the North Sea.

What is a fun fact about Baltic Sea? Compared to the ocean, the Baltic Sea is small, shallow and has a low total volume of water. The average depth of the Baltic Sea is only 55 metres, and the deepest point of the sea is in the Landsort Deep at 459 metres. The average depth of the oceans, on the other hand, is measured in kilometres.

Which country pollutes the Baltic Sea the most? HELCOM is alarmed that in 2010, the total water- and airborne input of nitrogen and phosphorus to the Baltic Sea was 977,000 tonnes of nitrogen and 38,300 tonnes of phosphorus, respectively. According to the Commission, the main contributors to nitrogen inputs were Poland (30%), Sweden (12%), and Russia (11%).

Is Baltic Sea water drinkable? The average salinity of seawater is 3.5 %, but in the Baltic Sea it is just 0.2 – 2 %, and in the Dead Sea it is significantly higher at 28 %. The temperatures fluctuate just as much. Just like brackish water, seawater is not suitable for drinking due to its high salinity, as it makes you more thirsty.

What is the ecology of the Baltic Sea? The Baltic Sea harbours a unique composition of species and landscapes. An estimated 100 species of fish, 450 species of macroalgae, 1000 zoobenthos species, 3000 plankton species and many thousands of unknown species of bacteria and viruses create the unique underwater biodiversity of the Baltic Sea.

What are the genetic traits of the Baltic people? The Baltic peoples show a mixture of eastern and western genetic traits, e.g. a high frequency of the blood group B combined with a very high frequency of the Rh- negative blood group.

Is the Baltic gene rare? Scientists discovered that the rare gene is encountered equally in those Latvians and Lithuanians who have highest gene concentration. It has therefore been called the Baltic ethnic genetic mark.

What are the Baltic facial features? It was characterised as "short-headed, broad-faced, with heavy, massive under-jaw, chin not prominent, flat, rather broad, short nose with low bridge; stiff, light (ash-blond) hair; light (grey or pale blue) eyes, standing out; light skin with a greyish undertone.

Where did the Baltic race come from? The prehistoric origin of the Balts, as of other Indo-Europeans, is obscure, but they arrived in the vast area of the eastern Baltic and west-central Russia in the 3rd millennium bc, bringing with them knowledge of agriculture and cattle raising.

Did Vikings sail the Baltic Sea? In the beginning, only a few seafaring Vikings survived the rough voyages, but the fleets grew over time, and there were soon hundreds of vessels known as longships. They sailed across the Baltic Sea and down Russian rivers as far as the Black Sea and the Caspian Sea to Byzantium and the Caliphate of Baghdad.

What was the Baltic Sea before the ice age? Before the last Ice Age, there was a warmer interglacial period called the Eemian warm period, which occurred about 130,000 to 115,000 years ago. During the Eemian warm period, the ocean level was elevated, making Fennoscandia an island. Wide straits connected the Baltic Sea basin to both the North- and White Seas.

Who does the Baltic Sea belong to? Proceeding clockwise from the west, the countries bounding the Baltic are Denmark, Sweden, Finland, Russia, Estonia, Latvia, Lithuania, Poland, and Germany.
