How to connect two subsystems in Simulink? To connect subsystems, use ports on a Subsystem block. The ports on a Subsystem block correspond with blocks inside the subsystem. For example, this Subsystem block has two input ports and one output port. The subsystem contains Inport blocks named In1 and In2 and an Outport block named Out1 .

How do I activate a subsystem in Simulink?

How to simulate a system in Simulink? Simulate a model interactively by clicking the Run button in the Simulink Toolstrip, or programmatically using functions like sim and set_param in the MATLAB Command Window or a MATLAB script.
